

SALARY INCREMENT RULES

Performance-Based Annual Increment Policy

Effective Date: 1 June 2026

1. Purpose and Scope

On 1 June 2026 a salary increment is announced for all employees. The increment is performance-based and is calculated from each employee's attendance record over the three-month assessment period of March, April and May 2026. The revised salary takes effect from 1 June 2026.

2. Assessment Period

The increment is computed on the basis of performance during the following three months:

- March 2026 – 31 days
- April 2026 – 30 days
- May 2026 – 31 days

Total days in the assessment period = **92 days**

3. Attendance Definitions

Each calendar day in the assessment period is classified for every employee into exactly one of three states:

- **Present** – the employee attended on a working day (shown green in the attendance sheet).
- **Absent** – the employee did not attend on a working day (shown red).
- **Weekly Off** – the employee's designated rest day (shown orange). Each employee has one fixed weekly off day.

For every employee: Present + Absent + Weekly Off = 92 days.

4. Working Factor

The working factor measures the proportion of the assessment period for which the employee was either present or on an authorised weekly off. Absent days reduce this factor.

$$\text{Working Factor} = (\text{Days Present} + \text{Weekly Off days}) \div \text{Total Days}$$

where Total Days = 92. Equivalently, Working Factor = $(92 - \text{Absent days}) \div 92$.

5. Productive Factor

The productive factor is a fixed organisational performance weighting applied uniformly to all employees. It is derived from four weighted performance components as follows:

A = Number of days in which total tokens generated is above Ref 3 line

B = Number of days in which total tokens generated is below Ref 3 line and above Ref 2 line

C = Number of days in which total tokens generated is below Ref 2 line and above Ref 1 line

D = Number of days in which total tokens generated is below Ref 1 line

$$\text{Productive Factor} = (A \times 0.5 + B \times 0.4 + C \times 0.3 + D \times 0.2) \div 100$$

6. Increment Calculation

The increment payable to each employee is the product of the current salary, the working factor and the productive factor:

$$\text{Increment} = \text{Current Salary} \times \text{Working Factor} \times \text{Productive Factor}$$

7. Final Total Salary

The revised salary effective 1 June 2026 is the current salary plus the increment:

$$\text{Final Total Salary} = \text{Current Salary} + \text{Increment}$$

8. Notes

- The productive factor is identical for all employees; differences in increment arise solely from attendance (the working factor) and the current salary.
- Weekly-off days are treated on par with present days for the working factor and are not penalised.
- Only absent days reduce the working factor, and therefore the increment.
