

Project Cost Estimation — Rules

These rules define how the cost of each project is estimated from its position on the 2020–2023 quarterly timeline. All figures are in cost units.

Cost components

Cost Component	Value
Starting cost — project begins mid-quarter	100
Starting cost — project begins at the start of a quarter	80
Running cost — per full quarter (excludes first & last)	60
Ending cost — project ends mid-quarter	150
Ending cost — project ends at the end of a quarter	120

The rules

If a project begins in mid-quarter, its starting cost is 100.

If a project begins at the start of a quarter, its starting cost is 80.

For each running quarter, the cost is 60.

If a project ends in mid-quarter, its ending cost is 150.

If a project ends at the end of a quarter, its ending cost is 120.

Total cost of a project = starting cost + (running cost × the number of full quarters it ran, excluding the first and last quarter, whether those are full or half) + ending cost.
